Research Summary

Area of Interest	IoT, IBN, SDN, WiFi-based long distance network
Research Experiences	7 Years
Number of Citations (Google Scholar)	635
H-Index (Google Scholar)	9
Number of Publications	48
Number of SCI Indexed Journals	17
Number of Patents Filed	2
Invited as Resource Person	14
Recent Publication Venues	IEEE/ACM/Elsevier Journals, IEEE Comm. letters, INFOCOM Worksp, GLOBE-COM, ICC, HPSR,...
Laboratories	Splice Lab (Dartmouth College, USA), SWAN Lab. (IIT Kharagpur, India), IoT Lab (NEHU, Shillong, India), Rural WiFi Lab. (NEHU, Shillong, India)
Training and Guidance	Deployment of WiFi-based Long Distance (WiLD) Network in Border Out Posts for Border Security Force (BSF), India, 2 March-4 April, 2018
Tutorial	"Programmability for Context-Aware Smart IoT Applications", WCNC'21, 2021 "Programmable IoT" Invited speaker: ACM India Summer School , 8 July, 2021.
Hardware & Software Platforms	SensorTag (CC2650), OpenMote (CC2538), TelosB (CC2420), RaspberryPi (Gateway), Arduino, and ContikiOS, NS-2, NS-3, Mininet, Ryu,...

Employment History

- Post-Doctoral Scholar:** Computer Science, DARTMOUTH COLLEGE, Hanover, USA (13 Jan 2022 –Till date).
NSF (USA) sponsored Project titled: **Security and Privacy in the Lifecycle of IoT for Consumer Environments**.
Responsibilities- Privacy-preserving smart home: (i) Study on user activity inference attacks, where a passive network observer can infer the private in-home activity of a user by analyzing encrypted IoT traffic metadata, (ii) Developing solutions for privacy against inference attacks by local adversaries such as WiFi eavesdroppers, and neighbors.
- Post-Doctoral Fellow:** Centre for Networked Intelligence, RBCCPS, and ECE, INDIAN INSTITUTE OF SCIENCE, Bengaluru, India (29 Sep 2021 –Dec 2021). **Responsibilities-** Designing SDN-enabled Intent-Driven Network Architecture.
- Research Associate (PostDoc.):** Department of Computer Science & Engineering, INDIAN INSTITUTE OF TECHNOLOGY, Kharagpur, India (21 Aug 2019 –20 Aug 2021).
SERB/IMPRINT-2 (Govt. of India) sponsored Project titled: **Unified Software-Defined Architecture for Industrial Internet of Things**.
Responsibilities- (i) Overall monitoring and coordination of the different components/manpower of the project, and (ii) Designing programmable network architecture for IoT.

Employment History (continued)

- 4  **Project Scientist:** Department of Information Technology, School of Technology, NORTH-EASTERN HILL UNIVERSITY, Shillong, India. (6 Nov 2015–19 Aug 2019.)
MeitY (Govt. of India) sponsored Project titled: **QoS Provisioning in Internet of Things (IoT)**
Responsibilities:(i) Overall monitoring and coordination of the different components/manpower of the project, and (ii) Designing MAC protocol for large-scale IoT.
- 5  **Junior Research Fellow-** Information Technology Department, School of Technology, NORTH-EASTERN HILL UNIVERSITY, Shillong, India. (Aug 2013–Jan 2015.)
DeitY (Govt. of India) sponsored Project titled: **QoS Provisioning in WiFi-based Long Distance Wireless Networks for Hilly Terrain Areas.**
Responsibilities: (i) Designing MAC and routing protocol for WiFi-based long distance network, (ii) Implementation and evaluation of proposed schemes over real Atheros driver for OpenWrt router.

Education

- 2016 – 2020  **Ph.D., North-Eastern Hill University, India** in Information Technology (22 Aug 2016-17 Nov 2020).
Thesis title: *Designing IEEE 802.11ah-based scalable network architecture for Internet of Things.*
- 2014 – 2016  **M.Tech., North-Eastern Hill University, India** in Information Technology.
Thesis: *Designing a MAC protocol for Internet of Things (IoT).*
First Class, 79% (14 Aug 2014- 8 Aug 2016)
- 2008 – 2013  **B.Tech., North-Eastern Hill University, India** in Information Technology.
Project: *Extension of NS-2 for Long Distance Wi-Fi support.*
First Class, 70% (21 July 2009- 8 Aug 2013)
- 2006 – 2008  **Higher Secondary, Assam Higher Secondary Education Council, India** in Science.
First Class, 71%, Dakshin Kamrup College (21 July 2006- 3 July 2008)
- 2003 – 2006  **High School Living Certificate, Board of Secondary Education, Assam, India**
First Class, 78%, Padupara Anchoic High School (3 June 2003- 14 May 2006)

Description of PhD work

Title	■ Designing IEEE 802.11ah-based scalable network for Internet of Things
About	■ IEEE 802.11ah has introduced several new concept for PHY and MAC layer to achieve communication over longer distances among a large number of low-power devices. However, it does not consider many interesting issues for supporting communication in IoT which provide motivation and necessity for designing a smart scalable IEEE 802.11ah-based IoT network focusing on the MAC layer aspects. For scalability in the 802.11ah-based network, the following issues are considered.
Objectives	■ <ol style="list-style-type: none">1. Estimation of optimal RAW size for large, dynamic, and heterogeneous IoT environment2. Managing event-driven traffic in RAW-based channel access mechanism employed large scale IoT3. Generation of dynamic Tx/Rx schedule for a relay node in supporting scalability over multi-hop networks4. Issues of congestion in periodic RAW-based MAC schemes for a large network
Objectives 1	■ We propose a method to estimate the RAW size based on traffic loads and provide relay node support for stations to use different MCSs. The proposed scheme significantly improves the performances of RAW-based 802.11ah MAC protocol. In a heterogeneous and saturation environment, the proposed protocol shows a performance close to a network with homogeneous nodes.
Objectives 2	■ We propose a QoS-aware MAC layer solution to increase network reliability and reduce critical traffic latency by an adaptive grouping and a priority scheduling scheme respectively in IEEE 802.11ah-based network. The proposed grouping scheme calculates the current traffic load and distributes them among different RAW groups if needed considering different requirements of stations.
Objectives 3	■ A dynamic relay and channel allocation scheme for 802.11ah is proposed by considering the angular separation of nodes and multiple available channels in the sub-1GHz band. We propose a distributed 802.11ah-based MAC protocol for supporting a massive number of devices. Utilizing the available channels the proposed protocol facilitates multi-hop communication efficiently.
Objectives 4	■ We propose a new RAW scheme for IEEE 802.11ah to reduce access delay in a large-scale periodic monitoring application network. It predicts the service interval and schedules the next frame without allowing for further contention. In saturation condition, the proposed protocol improves throughput up to 25% as compared to the traditional schemes.
